## Your 3 Month CME Planning Tool.

Use this format to plan your CME activities each quarter, i.e. every 3 months. Report your achievement of Outcomes with the Quarterly Effectiveness Focus Group Review requirement.

# **Linking Needs to Outcomes**

#### **Essential Area 2**

Linking needs	to results,	linking	needs and	result to	learning	objectives,	and	linking
needs, results,	and object	tives to	outcomes.					

\*CME Event or RSC: \_\_\_\_\_ List Topics in No. 3.

 $\begin{tabular}{ll} Step 1: Select Sources of Needs . See the chart below for an example of how to initially organize your needs assessment. \end{tabular}$ 

## **Types of Needs Assessments for Planning a CME Activity**

Select two or more sources of needs by Category: PROVIDE DOCUMENTATION

X	EXPERT NEEDS	X	PARTICIPANT NEEDS	X	OBSERVED NEEDS	X	ENVIRONMENTAL NEEDS
	Planning Committee		Previous related evaluation summary		Hospital/clinic quality assurance analysis		Evidence of offerings from other CME providers
	Departmental Chair		Focus panel discussions/interviews		Other clinical observances		Lay press
	Activity faculty		Needs assessment survey		Mortality/morbidi ty data		Direct-to-consumer ads
	Expert panels		Other requests from physicians		Epidemiological data		Other societal trends
	Research findings		Requested by affiliated institutions or physician groups		National clinical guidelines (NIH, NCE, AHRQ, etc.)		
	Required by a medical school authority				Specialty society guidelines		
	Required by governmental authority/regulation/law				Database analyses (e.g., Rx changes, diagnosis trends		

**Step 2. Synthesize your needs.** Boil down all of the needs you reviewed into just those that will be used to build your activity. Synthesize the final list into bulleted statements. You might end up with four to eight key needs.

### Write those bulleted needs down.

1.		
2.		
3.		
4.		

Step 3. State a desired educational result. Take each of the bulleted needs and sk yourself, "What do I intend to achieve from this educational activity relative to that pecific need?" This is a fundamental step that is frequently missing in the planning rocess. If you are able to make these "results statements," you will immediately have a ducational activity that is well-focused, and you should be able to measure its outcomes "ME is trying to help you link identified need to desired result." Use the example below or your documentation.  dentified need example: The American Heart Association guidelines state that igh levels of hyperlipidemia in patients with diabetic co-morbidity is the cause of nereased morbidity in those patients.  Your Identified Need:  Desired Result example: Identify your diabetic patients; screen for hyperlipidemia lace on appropriate lipid lowering medication(s).  Your Desired Result: (Form your activity Topic here!)  Step 4: Prepare learning objectives. Now that you know the need and desired esult, you can prepare learning objectives that are written in terms of physician erformance or patient health outcomes. Visualize learning objectives as the stepping tones that take you from the identified need to the desired educational result. Each set eed/results statements should have at least one learning objective. Consider writing our objectives in the second person ("you" or "your" phrases) so that the physician ersonally identifies with the objective, e.g.:  Disjective example: Decrease cardiovascular events of your diabetic patients with yperlipidemia by improving their cholesterol profiles.
sk yourself, "What do I intend to achieve from this educational activity relative to that pecific need?" This is a fundamental step that is frequently missing in the planning rocess. If you are able to make these "results statements," you will immediately have a ducational activity that is well-focused, and you should be able to measure its outcomes? "ME is trying to help you link identified need to desired result." Use the example below or your documentation.  dentified need example: The American Heart Association guidelines state that igh levels of hyperlipidemia in patients with diabetic co-morbidity is the cause of noreased morbidity in those patients.  Your Identified Need:  Desired Result example: Identify your diabetic patients; screen for hyperlipidemia lace on appropriate lipid lowering medication(s).  Your Desired Result: (Form your activity Topic here!)  Step 4: Prepare learning objectives. Now that you know the need and desired esult, you can prepare learning objectives that are written in terms of physician erformance or patient health outcomes. Visualize learning objectives as the stepping tones that take you from the identified need to the desired educational result. Each set ceed/results statements should have at least one learning objective. Consider writing our objectives in the second person ("you" or "your" phrases) so that the physician ersonally identifies with the objective, e.g.:  Objective example: Decrease cardiovascular events of your diabetic patients with yperlipidemia by improving their cholesterol profiles.

3.		

**Step 5.** Link Needs, Results, and Objectives to Outcomes. Always prepare your outcomes questions during the planning process. Take each need/result statement and ask yourself what one question can be asked of learners about how they implemented change in their practice. The outcomes question may be the educational results statement flipped into a question. Use this example as a guide:

**Outcomes question example:** Have you implemented measures that would lower cholesterol for diabetic patients in your practice? If the answer is no, what barriers have prevent this?

Your Outcomes question(s):	(Ask your participants these questions on
the Quarterly Participant Im	pact Study Form)

Your Outcomes question can be posed to your participant learners after your event, i.e., within a time period that you select. Or, in support of the Quarterly CME Effectiveness Requirement. This document should be turned in as proof of quarterly planning <u>your event</u> and <u>as support</u> for your Quarterly CME Effectiveness Review.

If your event is supported by pharmaceutical education grants,
This protects you by assuring that your vendors are fully complying with
PhRMA and OIG rules, and ensures that you invest in outstanding
education.
