

Pediatric Inpatient Falls: From Low Harm to High Reliability

Megan Hanshaw, BSN, RN, CPN
Pediatric Clinical Quality Assurance Coordinator

Problem Statement

Pediatric inpatient falls remain rare but preventable harm events. With six falls across both units in 2025, opportunities exist to maintain a consistent risk identification and prevention practice to ensure sustained patient safety.

Project Goal

Improve reliability of pediatric fall prevention bundle to $\geq 90\%$ compliance and eliminate falls with injury by December 2026.

Smart Aim

By December 2026, improve compliance with the pediatric fall prevention bundle to $\geq 90\%$ on both Pediatrics and the Pediatric Intensive Care Unit, and eliminate falls with injury, sustaining a low-harm inpatient environment.

Plan

PDSA Cycle 1: January 2026: Evaluation of 2025 Fall Risk Compliance for Peds and PICU.

PDSA Cycle 2: February 2026: Fall Prevention Land Visuals on both units.

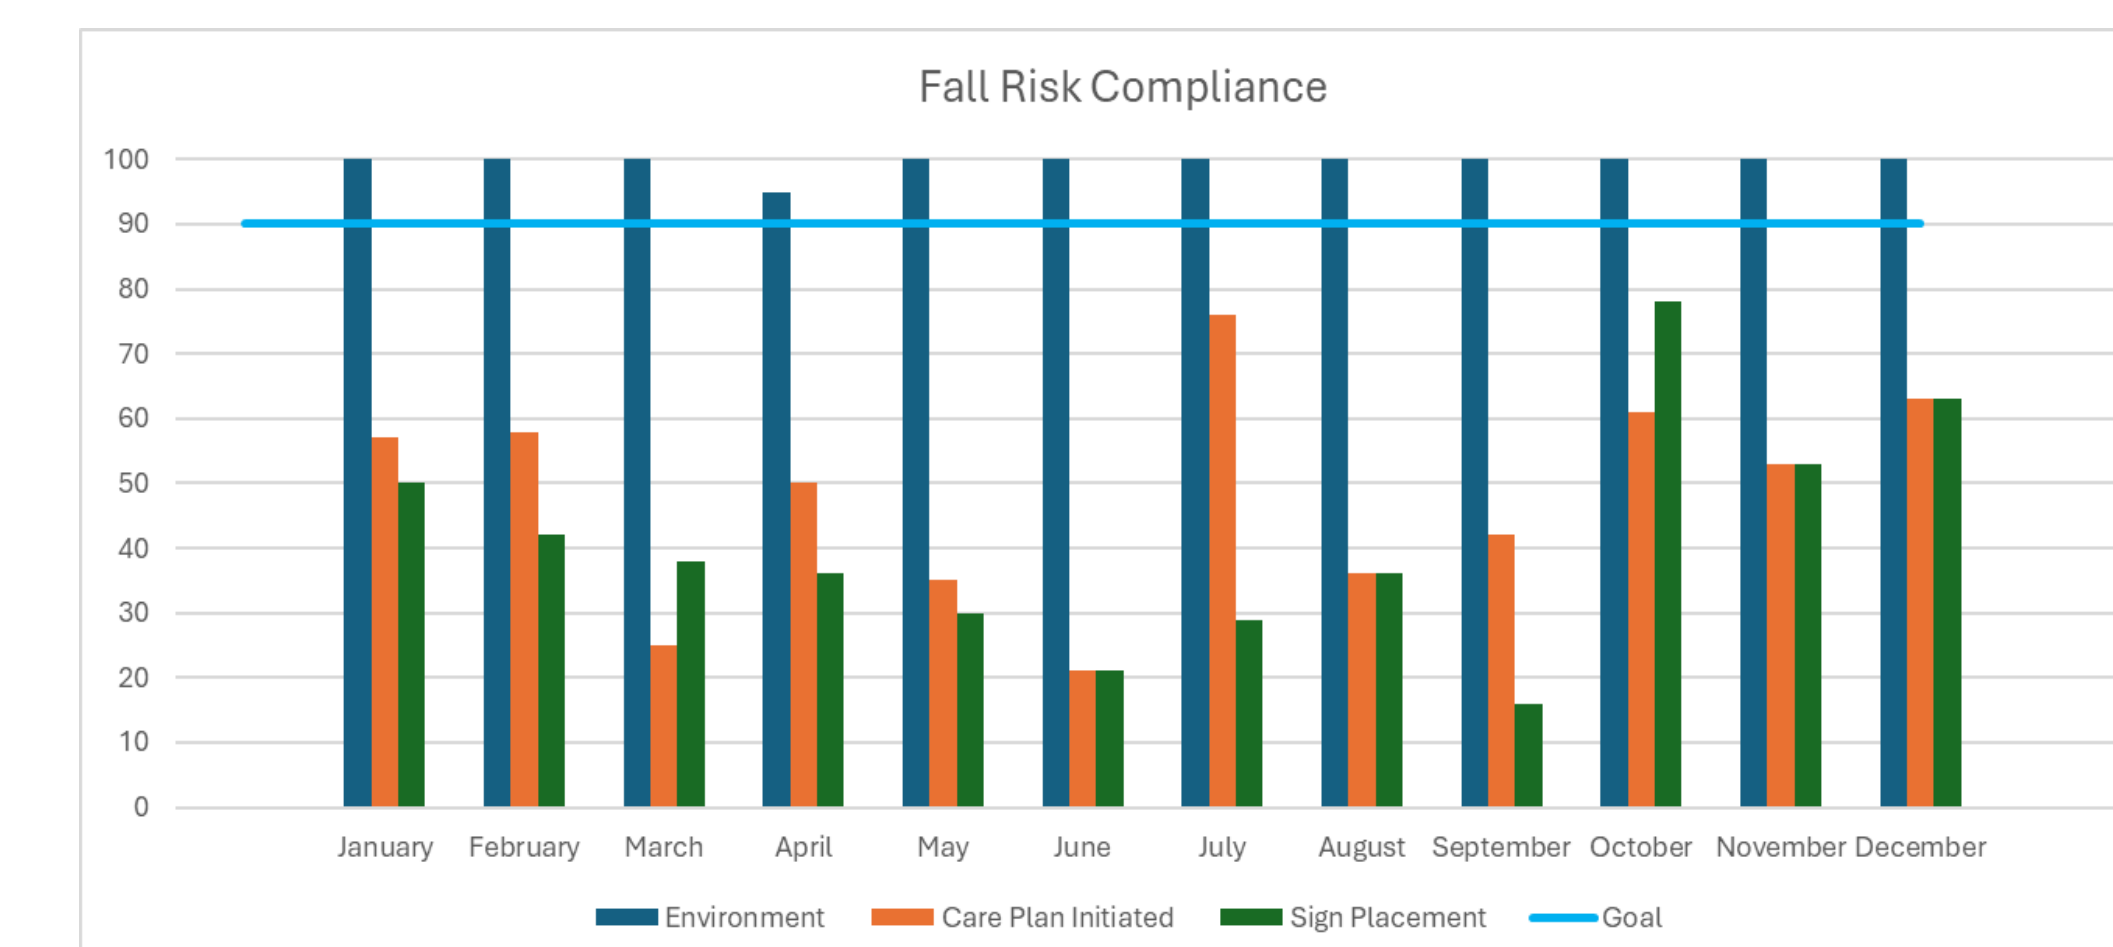

PDSA Cycle 3: February 2026: Working with Cerner Nursing Informaticist and Analytics to prompt a suggested Safety and Fall Risk Care Plan if patient's fall score is reached.

PDSA Cycle 4: March 2026: Education given to both units on new documentation. **March 20, 2026:** Go live of new pediatric falls documentation on Cerner.

PDSA Cycle 5: Tracking patient falls and bundle compliance until December 2026.

We will track monthly falls per 1,000 patient days and bundle compliance. The primary sign of improvement will be sustained reliability above 90%.

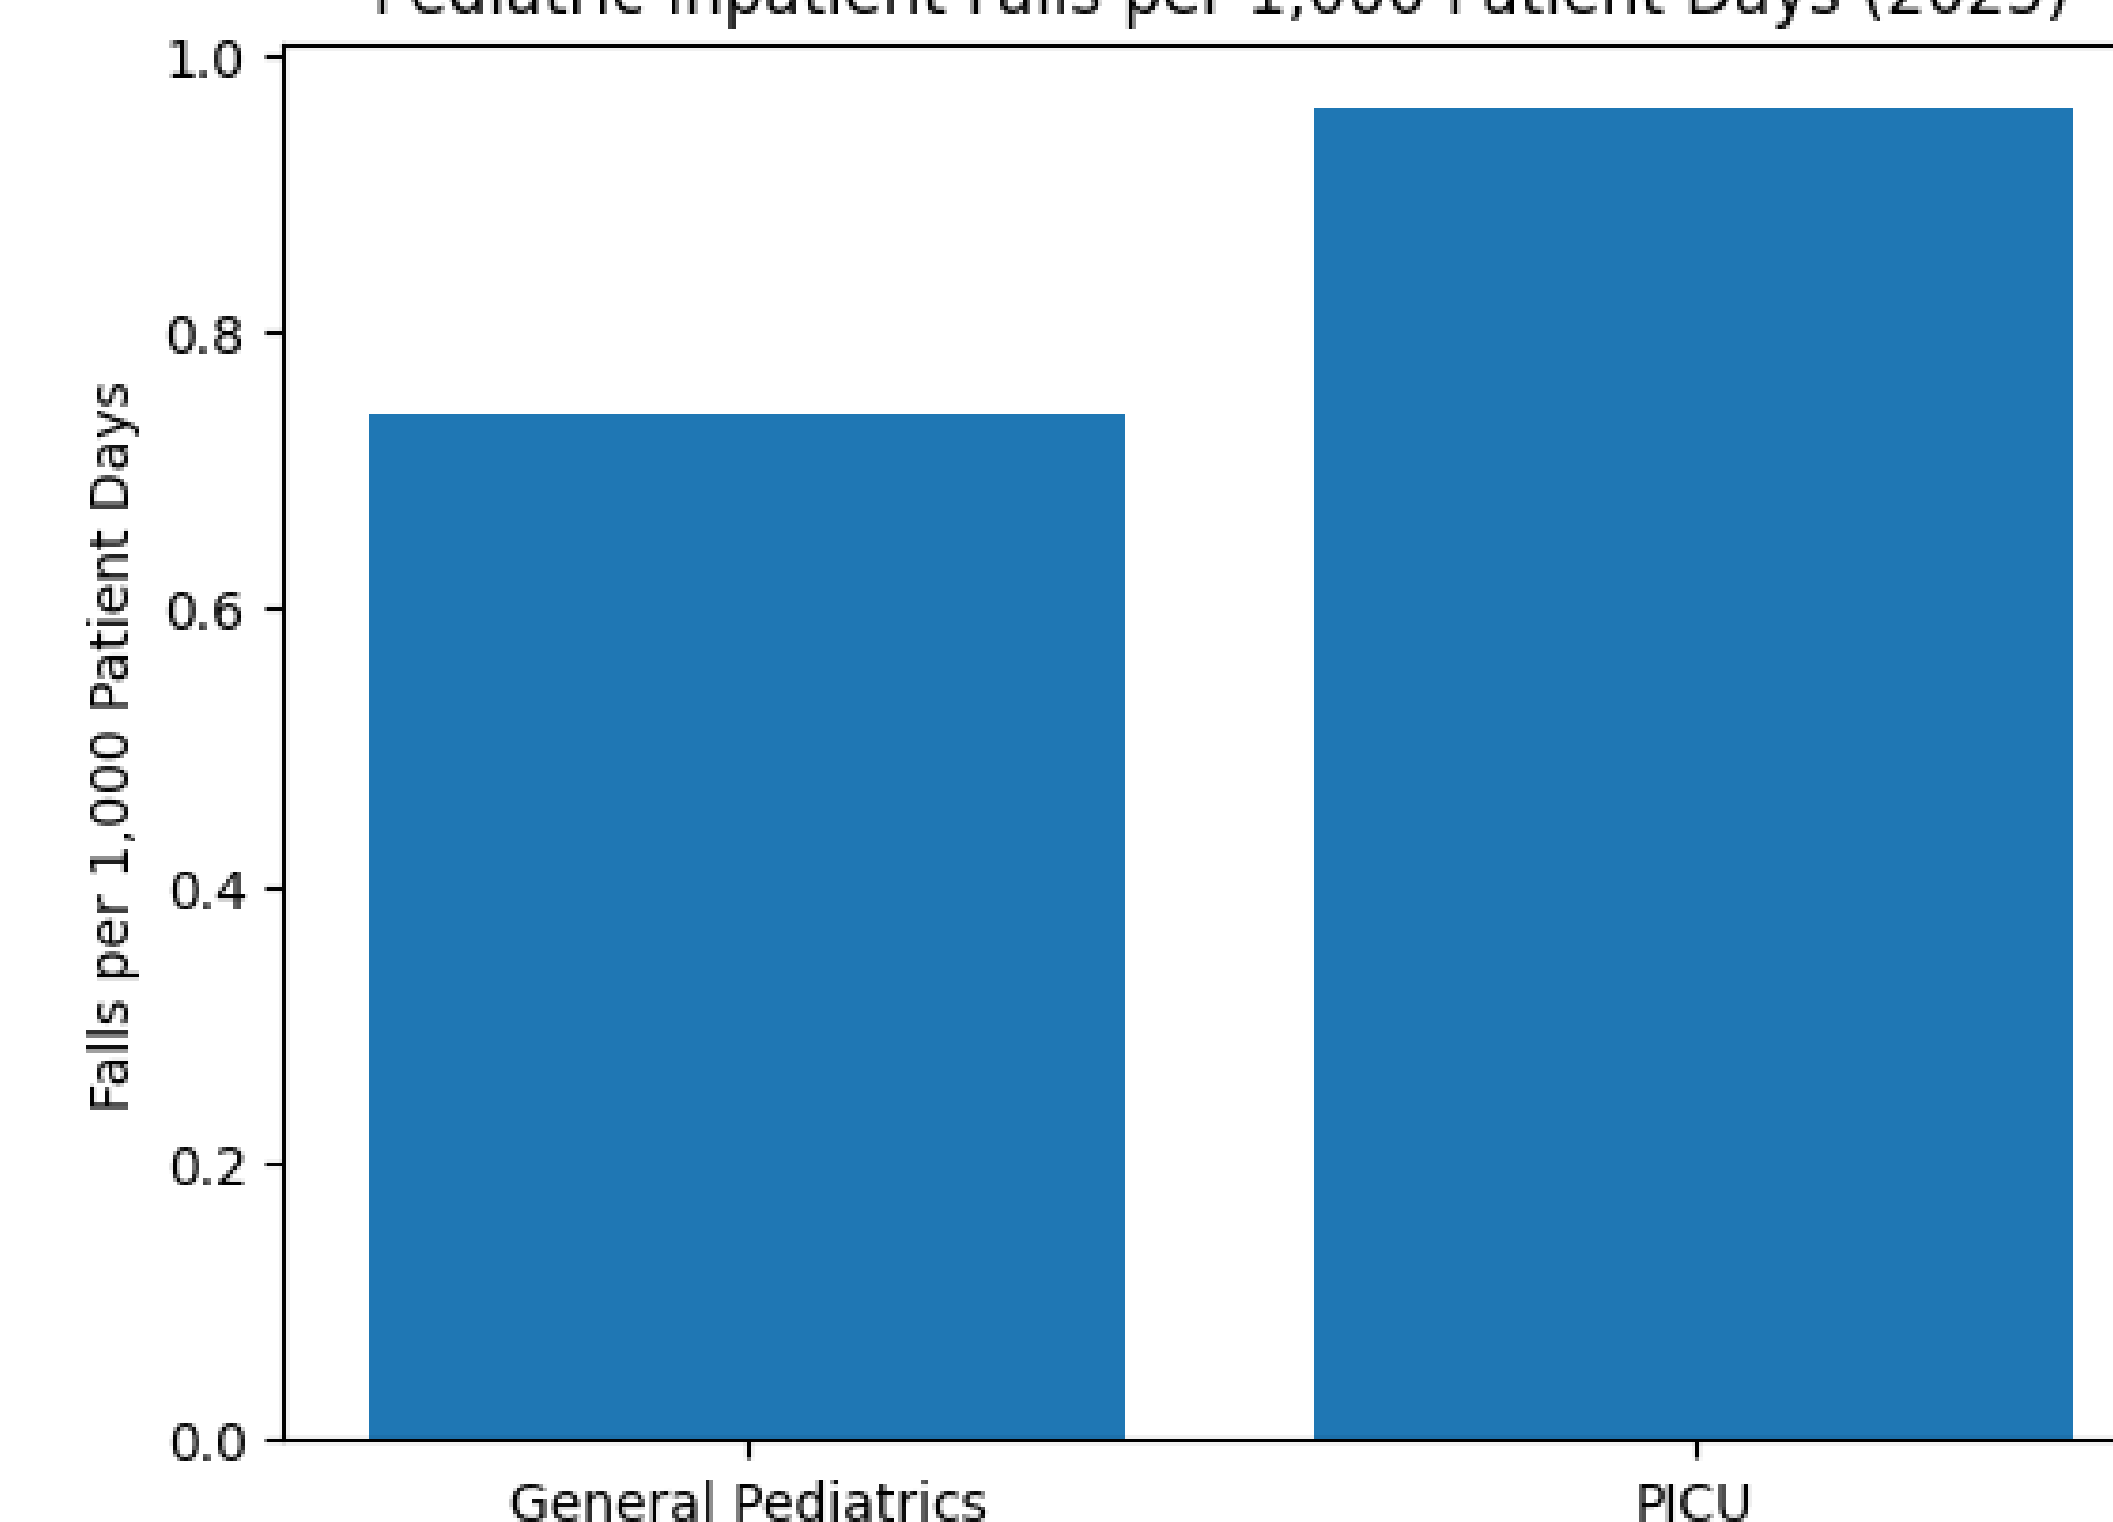

Pediatric Fall Risk Compliance

PICU Fall Risk Compliance

Pediatric Inpatient Falls per 1,000 Patient Days (2025)
